

Introduction to Artificial Intelligence

General information regarding exercises

September 21, 2022

Lecturers:

- Štefan Pócoš, stefan.pocos@fmph.uniba.sk, I-19
 - Iveta Bečková, iveta.beckova@fmph.uniba.sk, I-19
- In case of any questions, please contact us via MS Teams or e-mail.

INSTRUCTIONS

General rules of exercises:

- On each exercise, we will first review the relevant parts of previous lecture and assign a homework (in python). However it is recommended to know what the lecture was about.
- Start working on the homework during the lecture, then you have time to finish it until Friday 23:59 o'clock (≈ 2.5 days). Solutions submitted at most 24h after deadline will be graded, but you will get only 50 % of points.
- In each homework look for *YOUR CODE GOES HERE* and *EXAMPLES*.
- If you have any questions regarding the homework, ask us any time (ideally during the exercise) and we will try to help. Please, keep in mind that also us - lecturers are people and if you ask a question just few hours before deadline, we may not answer in time.
- Don't forget to upload your solution to moodle, it will also be graded there.
- On each exercise, we will briefly explain the correct solution of previous homework.
- Attendance is not compulsory, but do not forget to always upload your solution to moodle.

Cheating:

- If you include in your code some parts from internet, cite the source. **Always implement the key parts of algorithms by yourself.**
- If we find out that your code is not original and it is from a classmate/internet, it will be graded 0 points and you might have to face consequences (disciplinary action).
- All solutions are checked for similarities with each other, and with solutions from previous years.
- You might be asked to present your code and explain how it works.

- You can discuss the homework with each other, or with us, but please always write the code by yourself.

Grading:

- You can get **35 %** of points from homeworks. Individual assignments will be worth 1-3 points each, according to difficulty. Sometimes it will also be possible to gain some bonus points.
- Another **15 %** are reserved for a project, it will be assigned shortly before the end of the semester and you will have 3-4 weeks until deadline (which will be a few days before final exam).
- The remaining 50 % of points are from the final exam with prof. Beňušková and doc. Markošová.
- **To be able to take the exam, you need to get at least half of points from homeworks and at least half from project.**
